General Structure Detail

Hull

Reinforcements: E-Glass Fibers

Resin: Vinylester

Core materials: Balsa, Corecell M80

Superstructure

Reinforcements: Carbon Fiber

Resin: Vinylester

Core materials: CoreCell M80, Corecell M60

Construction Process

Sandwich construction process using vacuum bagging and wet laminating hand lay-up manufacturing methods with thorough quality checks in accordance with the Gulf Craft quality system and classification society.

Body

Specialized antifouling coating has been applied to the hull to prevent growth of subaquatic organisms that may affect a yacht's performance and durability.

A high-quality white color gel coat is applied for the final finishing of the yacht.

Watertight Bulkheads

Strength of the watertight bulkheads and their penetrations, and watertight integrity of the division is in accordance with requirements of Classification Society.

Openings in watertight bulkheads and in hull complies with applicable international convention

Mast Stand Equipment

Navigation Lights
GPS Antennas
Radar Scanners
Lighting Arrester
Wind Transducer
Night Vision Camera
Hard Top Equipment

Satellite Entertainment System Domes
Horn with two trumpets
VHF Antennas
Thuraya Satellite Antenna
Forward Search Light
Aft Search Light
Superstructure
